No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

The sequence can be transferred to expression plasmids for large-scale recombinant DNase B prodn. in bacterial hosts, esp. Escherichia coli. Inclusion of the leader peptide facilitates purification of the recombinant enzyme. Fragments of the DNA can also be used as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New DNA encoding Streptococcus pyogenes DNase B - for recombinant prodn. of the enzyme in other bacteria, useful in immunoassays or for treating cystic fibrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A modified DNase B gene (AAT12780) is the product of a PCR amplification of the Streptococcus pyogenes ATCC 14289 DNase B (AAT12774) from lambda clone 2-6. The modified gene codes for enzyme having an additional arguinne residue at the N-terminus (see AAR88825). The modified gene can be inserted into vector plasmid del-33 for prodn. of recombinant DNase B under control of the phage lambda pL promoter in Escherichia coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                    AAQ71612 encodes a mitogenic factor which exhibits rabbit peripheral blood lymphocyte mitogenicity and/or DNA hydrolysing activity. It is strongly associated with group A Streptococci and the nucleotide sequences can be used for the microdetection of the gene and provide an early diagnosis of infectious disease caused by the bacteria. S. pyogenes infection, also new promoter for expressing other
proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence shows a construct used in fusion of a phage lambda promoter to DNA encoding a Streptococcus pyogenes DNA-ase-B. Binding sites for polymerase chain reaction DNA primers (given in AAQ85038 and AAQ85039) are shown. The product is useful in production of diagnostic agents, vaccines or therapy of cystic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        84.9%; Score 919.4; DB 16; Length 944; ilarity 99.4%; Pred. The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenee), comparising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN6604-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Wholeic acids encoding (I) are used to detect Streptococcus in a bening (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromogoraphy, immunoassays, and distinguishing/identifying 248 368 120 300 180 240 428 488 360 548 9 New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -ATGGTAGCTCTTGTATCAGCCACAATGGCTGTAACAACAGTCACACTTGAAAATACTGCA 129 ATGAATCTACTTGGATCAAGACGGGTTTTTTCTAAAAAATGTCGGCTAGTAAAATTTTCA ATGAATCTACTTGGATCAAGACGGGTTTTTTTTTTTTTAAAAAATGTCGGCTAGTAAAAATTTTCA 189 ATGGTAGCTCTTGTATCAGCCACAATGGCTGTAACAACAGTCACACTTGAAAATACTGCA CTAAACGAAGCATTAGCATTCAATGACAGTCCTAACTTTACAAAACTTTAGGT ACTAGTCAGATTACTCCAGCACTCTTTCCTAAAGCAGGAGATATTCTCTATAGCAAATTA ACTAGTCAGATCACTCCAGCACTCTTTCCTAAAGCAGGAGATATTCTCTATAGCAAATTA craaacgaagcarragcargacarrcaargacagrcccaacrarracaaaaccrraggr GATGAGTTAGGAAGGACGCGTACTGCTAGAGGTACATTGACTTATGCCAATGTTGAAGGT GATGAGTTAGGAAGGACGCGTACTGCTAGAGGTACATTGACTTATGCCAATGTTGAAGGT AGCTACGGTGTTAGACAATCTTTCGGTAAAAATCAAAACCCCGCAGGATGGACTGGAAAC Gaps ΰ ö 73.7%; Score 798.6; DB 24; Length 813; 98.9%; Pred.                                                                                                                                                                                                                                    Lambda clone 2-6 (AAT12773) codes for Streptococcus pyogenes DNase B (AAR88821). It was obtd. from a library of S. pyogenes in vector lambda-gtil, established in Escherichia coli Y1090. The library was screened directly for enzymatic activity and postitive clone lambda 2-6 was recovered. The insert of this clone can be transferred to expression plasmids for large-scale recombinant DNase prodn. in E. coli. Fragments of the DNA can also be used as probes or primers.
                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                     The invention relates to a recombinant streptodornase and a process for its mass production from mutated Streptococcus equisimilis. This polynucleotide sequence represents a 966nt DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Staphylococcus epidermidis; open reading frame; ORF; bacterial infection; antibacterial; gene therapy; gene; ds.

                                                                                                                                                                                                  New DNA encoding Streptococcus pyogenes DNase B - for recombinant prodm. of the enzyme in other bacteria, useful in immunoassays or for treating cystic fibrosis
                                                                                                                                                                                                                                                                                               A PCR primer pair (AAT12778-79) was used for the amplification of Streptococcus pyogenes ATCC 14289 DNase B gene (see AAT12774).
Use of these primers gives a product that is processed identically to native DNase B when inserted into vector plasmid del-33 and expressed in Escherichia coli transformants. The N-terminal sequence of the recombinant DNase B is identical to that of the native mature enzyme (AAR88824). Highly purified DNase B can be obtd. in large quantities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ٠,

                                                                                                       ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABPS1244 to ABB27960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to soreen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SNP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5290
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and concogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences (58) and sequences complementary to (58). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms and also to be used in an array for nallysing diseases associated with CpG dinucleotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and old therapy of existing diseases or the predisposition to specific diseases by analysing controling methylations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5169 CTAATCAAAACAAATATA-TTCATAAATTAAATTTATAAATACAAATAAAAAA 5111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 215
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               155

useful Nucleic acid comprising fragment of chemically modified gene, us for diagnosis and treatment of diseases associated with abnormal cytosine methylation

Claim 1; SEQ ID NO 1445; 32pp + Sequence Listing; German.

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -

Claim 7; Page 3948; 4525pp; English.

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GAS (Streptococcus/GAS agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory

```
ö
activity. (I), mucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) as used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gapв

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 7, Application US/08393889
Sequence 7, Application US/08393889
Patent No. 6420152
GENERAL INFORMATION:
APPLICANT: Pang, Patty P.-Y.
APPLICANT: Patherina
TITLE OF INVENTION: Streptococcus pyogenes
ITTLE OF INVENTION: Streptococcus pyogenes
CORRESPONDENCE ADDRESS:
ADDRESSES: Sheldon & Mak
STRAES: Saldon & Mak
STRAET: California
COUNTRY: USA
ZIP: 91001
COMPUTER: LBM PC Compatible
OPERATION RYBABLE FORM:
MEDIUM TYPE: Ploppy disk
COMPUTER: Batter Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/393,889
FILING DATE:
CLASSIFICATION NUMBER: US/08/393,889
FILING DATE:
CLASSIFICATION NUMBER: 12,612
REPERENCE/DOCKET NUMBER: 9521
TELECOMMUNICATION INDER: 312,612
REPERENCE/DOCKET NUMBER: 9521
TELECOMMUNICATION INDER: 312,612
REPERENCE/DOCKET NUMBER: 9521
TELECOMMUNICATION INDER: 312,612
REPERENCE/DOCKET NUMBER: 9521
TELECOMMUNICATION INDER: 9

Patent No. 6420152;
GENERAL INFORMATION:
APPLICANT: Adams, Craig W.
APPLICANT: Belei, Marina
TITLE OF INVENTION: Recombinant DNase B Derived from
TITLE OF INVENTION: Streptococcus pyogenes
NUMBER OF SEQUENCES: 16
CORRESPONDENCE ADDRESS:
ADDRESSEE: Sheldon & Mak
                                 Indels

Patent No. US20020081622A1

GENERAL INFORMATION:
APPLICANT: Pang, Patty P.-Y.
APPLICANT: Belei, Marina
TITLE OF INVENTION: Recombinant DNase B Derived from TITLE OF INVENTION: Streptococcus pyogenes

NUMBER OF SEQUENCES: 16
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Version #1.25

excised from lambda ZAP; Site_1: EcoRV; Site_2: EcoRV;
Genomic DNA was prepared from asynchronous blood stage
forms of the cloned ANKA isolate of P. berghei grown in
laboratory Swiss white mice. The DNA was purified from
contaminating host DNA by Hoechst Dye 33258-CsCl
ultracentrifugation and precipitated. Purified DNA was
digested with mung bean nuclease in the presence of 36-38*
formanide at 50 C, as described (Vernick, K.D., Imberski,
R.B. and McCutchan, T.F. 1988 Nucleic Acids Research
16:883-6896. The ends of the digestion fragments were
polished using T4 DNA polymerase, and the fragments size
selected in the range 500-2000 bp. These were ligated into
the EcoRv-cleaved and dephosphorylated pBluescript SK(+)
vector. Recombinant plasmids were used to transform E.
coli Xillo-Gold host cells.
